(a) memory: weight of past changes
Weight in the Caputo derivative
Time since the change, $t - s$
α = 0.5
α = 0.7
α = 0.9
(b) slow, power-law decay
Fraction remaining, $E_\alpha(-(\gamma t)^\alpha)$
Time, in units of $1/\gamma$
α = 0.5
α = 0.7
α = 0.9
α = 1.0 (exponential)
